Preamble

India lives in rural households as 60 percent of Indian population is dependent on agriculture and allied agriculture activities. India stands second for its GDP growth between 7.5-9 percent after China. However growth rate in rural sector seldom crosses above 4 per cent The dream of prosperous India can only be achieved by use of technological innovation and management of resources in every aspect of rural life.

The commitment in the rural development should be enhancement of rural sustainable rural livelihoods and promoting gender equality. The ways and means have to find out to make the economic growth processes more inclusive by reaching out to millions of poor households in rural areas.

ICT can play a very important role in integrated development in rural sector for agriculture, education, health and infra structure etc. Successful models have already been developed worldwide to help the rural population to achieve real development goals effectively and enhancing the capability of rural masses to be a part of emerging knowledge society.

It has inherent strength for integration of market economy, speeding of production processes and faster communication between individuals, groups, enterprises, communities and government. ICT for rural development is the way to reach individual rural household to move forward in the qualitative terms indicative of true development and this necessitate some awareness, brain storming on this aspect and interaction of agencies & state authorities on the platform of this seminar..

Objective

- ☐ To increase awareness of ICT models for development of agriculture, health, education and rural infra structure.
- ☐ To study the scope of current technological innovation for ICT application and assessment of future requirement.
- ☐ To research and develop strategy of ICT application in reduction of poverty and enhancement of rural livelihood in site specific locations.
